DETAILED ACTION

Election/Restrictions

Applicant's election of the figures 1-6 species in Paper No. 5 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 defines the fixed axis as being spaced from the wiper shafts, however, the shafts do not appear to be part of the "drive" as set forth in claim 1. Claim 1 sets forth that the drive is "for" imparting oscillation to a pair of spaced shafts. To now claim that the axis is spaced from the shafts leads to confusion as to exactly what is being claimed. The claim as been treated as

Art Unit: 1744

though it is only the drive as set forth in claim 1. The claims could be amended to positively claim the shafts with the drive as a combination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4-9, 12, 14-16 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by GB patent '501.

The GB patent discloses the invention as is claimed. Note figure 3 wherein a wiper drive is shown as is claimed. Note drive link (11') having three connection points along its length. The drive link is coupled to an idler pivot link (15) which has three crank arms extending radially thereabout. First, second and third links (16,17',18') are coupled with the idler link and the second and third links (17',18') are crossed with respect to one another.

With respect to claim 6, the relationship of components shown in figure 3 will lead to lower acceleration of the wiper shafts proximal the reversal position than intermediate the reversal position and park position. It appears that, based on the arrangement of linkage shown, the highest acceleration will be intermediate the end positions of the wiper shafts.

Art Unit: 1744

With respect to claim 14, the idler pivot links of the GB patent will impart a dwell to at least one of the wiper shafts in proximity to the park position. The purpose of the arrangement of links is to reduce the acceleration of the wiper shafts or at least one of the wiper shafts adjacent the park position such that they do not interfere with each other during activation.

Allowable Subject Matter

Claims 2, 10, 13, 17 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary K Graham whose telephone number is 703-308-1270. The examiner can normally be reached on Tuesday to Friday (6:30-4:00).
